

## AIR HANDLING Bull's-Eye

### Customer Testimonial

"Prior to installation of the XACT Air Handling Solution we had noticed a general trend with increasing bearing temperatures. Our production schedule was in jeopardy of premature unscheduled maintenance. We contacted XACT Fluid Solutions for an answer to our problem. The proposed solution was implemented and we were able to establish more linear bearing temperatures. Tracking temperatures through our existing thermocouples is less of a concern as we have seen an insignificant variation in overall temperature through a full year of production.

The consistency in bearing performance has allowed for maintenance resources to address other plant concerns. We are very satisfied with this solution and we are looking forward to other improvements with our lubrication."
